Front View of Adlake, No. 319 Gate Lantern

Side view of
Adlake No. 319 Gate Lantern

The above illustration shows a simple and effective way of making a crossing gate lamp out of any standard Adlake lantern. This crossing gate Lantern complies with the Am. Ry. Assn. rules. The lantern is hung so that it is always vertical, and a long-time burner can therefore be used in it.

The gate Lantern is made by simply adding the sheet-tin shields, which are fastened in the manner indicated, leaving an opening at the front and back through which the light is visible.
